

Engineering Collection

The Engineering Collection provides extensive coverage of scientific and technical literature spanning all branches of engineering and related applied science fields. Researchers have access to millions of full-text articles from a diverse array of content types, including thousands of peer-reviewed journals. Additionally, specialized abstracting and indexing (A&I) coverage ensures the broadest and most in-depth access to emerging technologies and interdisciplinary engineering research.

Key benefits:

Premium scholarly journals

2,300 full-text scholarly journals from publishers such as Springer, Cambridge University Press, Nature, and Emerald.

Authoritative, multiformat content

A wide variety of content types including trade publications, industry journals, news sources, conference proceedings, and other research materials.

Reliable, high quality A&I

Interdisciplinary A&I broadens and deepens coverage from important engineering societies such as IEEE, ASME, American Chemical Society, and SAE

What can users do with the Engineering Collection?

- **Search efficiently:** The user interface empowers researchers to conduct thorough searches with precision and speed.
- **Access content:** A wide range of sources, including journals, conference proceedings, dissertations, reports, and more.
- **Gain insights:** Web of Science citation counts in the ProQuest Platform aid discovery and assessment to help users quickly locate key papers on topics of interest, and stay up to date with the latest research.
- **Find full text:** Researchers gain immediate access to thousands of full-text titles and essential content sources identified during the search process.

Broad Coverage:

- Bioengineering
- Chemical Engineering
- Civil Engineering
- Electronic Engineering
- Environmental Engineering
- Mechanical Engineering
- Software Engineering
- Sustainability

The Engineering Collection is part of ProQuest One Applied & Life Sciences which also includes Advanced Technologies & Computer Science Collection, Biological Science Collection, and Materials Science Collection
