

## Description

Established by the American Geosciences Institute (AGI) in 1966, GeoRef is AGI's most comprehensive geosciences database with worldwide coverage growing by more than 100,000 references a year. The database contains more than 4 million references to geoscience journal articles, books, maps, conference papers, reports and theses.

GeoRef includes an online thesaurus that provides definitions of the terms, along with broader, narrower, and related terms.

## Subject Coverage

The subject coverage of the publications indexed in GeoRef includes the following major areas:

- Areal Geology
- Economic Geology
- Energy Sources
- Engineering Geology
- Environmental Geology
- Extraterrestrial Geology
- Geochemistry
- Geochronology
- Geomorphology
- Geophysics
- Hydrology
- Marine Geology
- Mathematical Geology
- Mineralogy
- Mining Geology
- Paleontology
- Petrology
- Seismology
- Stratigraphy
- Structural Geology
- Surficial Geology and Instrumentation

## Date Coverage

1669 – current (North America)  
1933 – current (worldwide)

## Update Frequency

Every two weeks

## Geographic Coverage

International

## Document Types

- Reports
- Books and Monographs
- Conferences, Symposia, Meetings
- Government Documents
- Journal Articles
- Theses and Dissertations

## Publisher

GeoRef is produced by the American Geosciences Institute. Questions concerning file content should be directed to:

AB

Abstract (summary) [Translate](#)

Six species of conulariids, assigned to four genera, were recovered from the type locality of the Cat Head Member of the Red River Formation in southern Manitoba, Canada. These are middle Katian (Late Ordovician) in age. The most abundant conulariid species from this locality, *Conularia porcella*, is new, and is represented by 21 specimens. Additionally, 28 three-dimensionally preserved micromorphic conulariids, assigned to *Eoconularia* aff. *loculata*, were recovered using acetic acid preparation from limestone samples of late Katian (Late Ordovician) age. These samples had been collected from Churchill, northern Manitoba, by the Geological Survey of Canada's J. B. Tyrrell in 1894. These taxa are unusually abundant for conulariids, which are normally represented by only a few specimens from any given locality, and this abundance may be a reflection of the exceptional preservation at these two localities.

## SEARCH FIELDS

Field name	Field code	Example	Description and Notes
Abstract	AB	ab("conulariid species")	Use adjacency and/or Boolean operators to narrow search results.
Abstract present	ABANY	ordovician AND abany(yes)	Add: <i>AND ABANY(YES)</i> to a query to limit retrieval to records with abstracts.
Accession number	AN	an(2013-078135)	A unique document identification number.
All fields	ALL	all("red river formation")	Searches all fields in bibliographic files. Use adjacency and/or Boolean operators to narrow search results.
All fields + text	--	"red river formation"	Same as ALL field code. Searches all fields in bibliographic files.
Author <sup>1</sup>	AU	au(Young, Graham A.)	Includes all Authors.
First author	FAU	fau(Robson, Sean P)	First name listed in Author field. It is included in Author browse, but its position cannot be specified in the Author browse.
Corporate/institutional author	CA	ca(geological survey PRE/2 canada)	
Author affiliation	AF	af("Manitoba Museum")	
Availability	AV	av("geological survey" N/2 canada)	Displays in Notes field.
Classification <sup>1</sup>	CC	cc(10) cc("Invertebrate paleontology")	Use either Classification codes or names.
CODEN	CODEN	coden(JPALAZ)	
Conference country	CCNT	ccnt(vietnam)	
Conference information	CF	cf(karst regions)	Includes conference name.

Field name	Field code	Example	Description and Notes
Conference title	CFTI	cfti("GEOKARST 2009")	
Conference event start date	ESDT, CDT	esdt(2009-11-12)	
Conference event end date	EVDT	evdt(2009-11-15)	
Conference location	CG	cg(hanoi)	
Country of publication	CP	cp(united kingdom)	Displays in Publisher field.
Date revised	DREV	drev(2013-01-01)	
Document feature	DF	df(geol. sketch map*)	
Document title	TI	ti("Late Ordovician conulariids from Manitoba, Canada")	Includes Title, Alternate Title, Original Title, and Subtitle but not Publication Title (PUB).
Title only	TIO	tio(neue buwal-richtlinie)	Searches only the Title, not Subtitle or Alternate Title.
Alternate title	OTI	oti("mineral construction waste")	Includes Alternate title, Subtitle, and Original-language title if available.
Document type	DTYPE	dtype>Analytic, Serial)	
DOI	DOI	doi(10.1666/12-0370)	Digital Object Identifier. Search the portion of the DOI that follows <a href="http://dx.doi.org/">http://dx.doi.org/</a> .
Editor	ED	ed("smith, bernard j")	
First available	FAV	fav(2013-10-03)	Indicates the first time the document was loaded on PQD. It will not change regardless of how many times the record is subsequently reloaded, as long as the Accession Number does not change.
From database <sup>2</sup>	FDB	"oil spill preparedness" AND fdb(georef) "oil spill preparedness" AND fdb(10000030)	Useful in multi-file searches to isolate records from a single file. FDB cannot be searched on its own; specify at least one search term then AND it with FDB.

<sup>1</sup> A Lookup/Browse feature is available for this field in the Advanced Search dropdown or in Browse Fields.

<sup>2</sup> Click the "Field codes" hyperlink at the top right of the Advanced Search page. Click "Search syntax and field codes", then click on "FDB command" to get a list of database names and codes that can be searched with FDB.

## SEARCH TOOLS

Field codes are used to search document fields, as shown in the sample document. Field codes may be used in searches entered on the **Basic Search**, **Advanced Search**, and **Command Line** search pages. **Limit options**, **Look up lists**, and **"Narrow results by" filters** tools are available for searching. Some data can be searched using more than one tool.

## LIMIT OPTIONS

Limit options are quick and easy ways of searching certain common concepts. Check boxes are available for:

### Scholarly journals

Short lists of choices are available for:

### Document type, Language

**Date limiters** are available in which you can select single dates or ranges for date of **publication** and **updated**.

## BROWSE FIELDS

You can browse the contents of certain fields by using Look Up lists. These are particularly useful to validate spellings or the presence of specific data. Terms found in the course of browsing may be selected and automatically added to the Advanced Search form. Look Up lists are available in the fields drop-down for:

### Author, Classification, Publication title, Subject

## THESAURUS

The GeoRef Thesaurus is available by clicking on the “Thesaurus” hyperlink on the Advanced Search page. Thesaurus terms may be searched within the thesaurus, then selected to be added automatically to the Advanced Search form.

## “NARROW RESULTS BY” FILTERS

When results of a search are presented, the results display is accompanied by a list of “Narrow results by” options shown on the right-hand panel. Click on any of these options and you will see a ranked list showing the most frequently occurring terms in your results. Click on the term to apply it to (“narrow”) your search results. “Narrow results by” Filters in GeoRef include:

**Scholarly journals, Source type, Publication title, Document type, Subject, Classification, Language, Database, Publication date**

## LOOK UP CITATION

If you need to trace a particular bibliographic reference, use the Look Up Citation feature. Find a link to this toward the top left-hand corner of the Advanced Search page, or in the drop list under Advanced on any search form; click this and you will go to a form where you can enter any known details of the citation, including document title, author, journal name, volume, issue, page, publication date, ISSN.

## DOCUMENT FORMATS

Document Format	Fields	Online	Export / Download
<b>Brief view</b>	Title and Publication date.	✓	
<b>Detailed view</b>	Same as Brief view plus a 3-line KWIC window.	✓	
<b>KWIC (Keyword in Context)</b>	Detailed view plus all occurrences of your search terms, highlighted within the fields where the terms occur.	✓	✓
<b>Preview</b>	Title, Author, Publication title, Publisher, Volume, Issue, Pagination, Publication date, Abstract, Subject.	✓	
<b>Brief citation</b>	Complete record minus Abstract and Indexing	✓	✓
<b>Citation</b>	Complete record minus Abstract	✓	
<b>Citation / Abstract</b>	Complete record	✓ <sup>3</sup>	✓
<b>Full text PDF</b>	PDF version of the original article	✓ <sup>3</sup>	
<b>Custom</b>	Choose the fields you want.		✓ <sup>4</sup>

<sup>3</sup> In Online-view mode, PQD gives access to two Document Formats only: *Brief citation*, and the ‘most complete’ format available. Depending on the database, or the amount of data available for a record, the most complete format may be any one of *Citation*, *Citation/Abstract*, *Full text*, or *Full text – PDF*.

<sup>4</sup> Custom export/download format is available in the following mediums only: HTML, PDF, RefWorks, RTF, Text only.
